MINUTE ENTRY  
FALLON, J.  
May 11, 2001

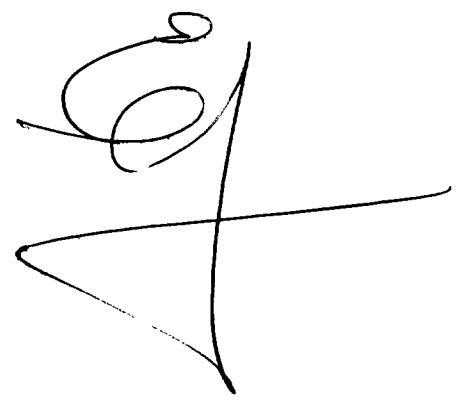

UNITED STATES DISTRICT COURT  
EASTERN DISTRICT OF LOUISIANA

IN RE: PROPULSID : MDL NO. 1355  
PRODUCTS LIABILITY LITIGATION : SECTION "L"  
..... : JUDGE FALLON

THIS DOCUMENT RELATES TO ALL CASES:

Following the pretrial status conference on April 19, 2001, the Court heard argument from counsel on Plaintiffs' motions to strike objections to discovery and to compel production of documents from entities under the control of defendants Johnson & Johnson and Janssen Pharmaceutica. The Court denied Plaintiffs' motions. The reasons orally assigned for the Court's ruling at the conference are attached to this minute entry.

Doc.No. 180

10                   THE COURT:    Thank you.  Both sides, as I have said,  
11 have favored me with thorough briefs, and I have profitted from  
12 the oral arguments.  I'm ready to rule on the motions.

13                   The plaintiffs in this particular case submitted a Rule  
14 34 merits request for production of documents.  The request  
15 contains over one hundred requests with over one hundred  
16 subparts.  The plaintiffs' request for production defines the  
17 defendant, that is to say the party or parties who are to furnish  
18 the response, to respond to the response, to include, "every  
19 company affiliated with each such company by common ownership or  
20 control."

21                   The defendants object to the production of the  
22 documents from any foreign facilities other than the documents  
23 from Jansen Pharmaceutica N.V. in Beerse, Belgium.  Such  
24 documentation the defendants claim are neither relevant nor  
25 reasonably likely to lead to relevant discoverable material.

1 Therefore, the defendants, in essence, decline to produce  
2 documents created, or for that matter, located at other foreign  
3 operating companies, [FOCs, as they term them] affiliated with  
4 Jansen, even though these companies may have had something to do  
5 with Propulsid.

6 It should be noted, however, that the defendants have  
7 agreed to produce, and are actually producing, or will produce  
8 all potentially relevant documents located in any Jansen or  
9 Johnson and Johnson in the United States as well as the Jansen  
10 Pharmaceutica N.V. in Beerse, Belgium. These documents are being  
11 provided in CD ROM format with sortable index of objective coding  
12 and searchable OCR text for unredacted documents.

13 The plaintiffs move to strike the defendants'  
14 objections and seek also to compel production of the documents  
15 from all foreign entities affiliated by common ownership or  
16 control. The plaintiffs claim that the information is relevant  
17 and necessary to the preparation of their particular case.  
18 Defendants, on the other hand, respond that the requests are  
19 overly broad, they also argue the requested material is  
20 irrelevant and that the requests are burdensome.

21 The defendants' claim of irrelevance does have some  
22 merit. There has been some change in the definition of  
23 "relevance". For over five decades Rule 26 defined the scope of  
24 discovery as, "Any matter not privileged which is relevant to the  
25 SUBJECT MATTER involved in the pending action." On December the

1 1st of 2000, the rule was amended to limit discovery, "to matters  
2 relevant to the CLAIM OR DEFENSE OF THE PARTY," except for good  
3 cause. The thrust of the change seems to be to reign in  
4 discovery, or restrict it somewhat and to give the Court a  
5 greater hand in deciding the scope and nature of the discovery.  
6 Moreover, some of the requests call for information which is or  
7 may be specific to the location or locality. For example, the  
8 application requirements to regulatory agencies may be different;  
9 also, stress, diet, custom usage, and other factors may well  
10 differ greatly from country to country. All of this supports a  
11 claim of irrelevancy.

12           However, the defendants arguments attacking or seeking  
13 to debunk relevancy is substantially weakened when the nature of  
14 the plaintiffs' claims is scrutinized. The plaintiffs contend  
15 that the defendants designed, manufactured and marketed an unsafe  
16 product. That they misrepresented the safety of the product,  
17 which they knew or should have known was unsafe. That they  
18 failed to warn of known risks of the product. What the  
19 defendants knew or what they should have known, and when they  
20 knew it, or when they should have known it is an "issue" in the  
21 plaintiffs' claims.

22           In this regard, it is significant to note that the  
23 plaintiffs claim that there is some evidence to indicate that  
24 Propulsid was marketed for years abroad before approved in the  
25 United States. The drug was introduced in Europe in 1988 and was

1 placed on the market in the United States in 1993. Plaintiffs  
2 suggest that there may have been some side affects or adverse  
3 reactions before 1993, the time it was introduced in the United  
4 States and perhaps as far back as 1981. If so, the foreign  
5 subsidiaries, so say the plaintiffs, may be the warehouse or the  
6 repository of such information. Therefore, the relevance  
7 requirement, even under the most conservative or restrictive view  
8 of the present Rule 26, may be satisfied.

9           However, relevancy is not the only factor to be  
10 considered, particularly in a manner of this nature. An MDL case  
11 involving perhaps several million documents, costing many  
12 millions of dollars to produce, with potential likelihood of  
13 business interruption presents peculiar problems. The court,  
14 according to the cases, is authorized to limit discovery if it  
15 determines that, (1) the discovery sought is cumulative or  
16 duplicative or is obtainable from some other source that is more  
17 convenient, less burdensome, or even less expensive. Or where  
18 the burden or expense of the proposed discovery outweighs its  
19 likely benefit, taking into account the needs of the case, the  
20 Court may consider the amount in controversy, the parties  
21 resources, the importance of the issues at stake in the  
22 litigation, and the importance of the proposed discovery in  
23 seeking to resolve the issues.

24           Moreover, in this particular case, we are confronted  
25 with foreign discovery which adds an additional element. The

1 cases seem to make some distinction in foreign discovery as it  
2 relates to non-foreign or United States discovery. The seminal  
3 case on this issue is Societe Nationale Industrielle Aerospatiale  
4 v. United States 482 U. S. 522 (1987), which the Fifth Circuit  
5 picked up in In Re Anschuetz and Co 838 F.2d, 1362, (1998).

6           The Court in Aerospatiale suggests that American courts  
7 in supervising pretrial proceedings involving foreign entities  
8 should exercise special vigilance in order to protect foreign  
9 litigants from the danger of unnecessary or unduly burdensome  
10 discovery. Objections to discovery that foreign litigants  
11 advance should receive most careful consideration. The exact  
12 line, the Courts say between reasonable and abusive discovery  
13 must be drawn by the trial court based on the particular facts of  
14 the case and the foreign interest involved.

15           Foreign discovery, it seems to me, as articulated in  
16 the cases that I have reviewed, imposes issues of comity between  
17 nations and also key issues of enforceability. Neither issue is  
18 insurmountable, but does require a cautious, deliberate and  
19 specific approach.

20           After considering all of the above matters and  
21 balancing the benefit with the burden of the discovery of the  
22 records of these FOCs, other than Beerse, it is the conclusion of  
23 the Court that it is not appropriate to conduct the broad based  
24 discovery that the plaintiff now seeks. At this time, discovery  
25 should be limited to the United States and Beerse, as well as

1 those FOC documents which are being produced and that are  
2 traditionally sent to the FDA in the United States and those  
3 matters dealing with labeling or scientific safety data, or  
4 adverse event evaluation material.

5           Accordingly, the plaintiffs' motion to strike the  
6 objections and the motion to compel production are denied. But  
7 let me say this: the problem that I see with the current status  
8 of the discovery request is it's broad nature. The broad nature  
9 of the requests, in themselves, as I said once before, make it  
10 overly burdensome, difficult and in the long run complicates  
11 matters more than it helps. The requests are too general and  
12 lack any reasonable specificity.

13           If the parties, in the future, reach the point in  
14 discovery where certain specific items, specific locations,  
15 specific references in depositions focus on areas which can be  
16 defined with more certainty, with greater specificity, then this  
17 material or some material from the FOCs may well be not only  
18 relevant but also produceable.

19           Hopefully, learned counsel for both sides will know  
20 whether or not this occurs and will act appropriately and it will  
21 not be necessary for the Court to take action or even consider  
22 the matter.

23           Thank you, gentlemen.
